

Node - Gas Store

Express - Ingredients + Utensils

Why react is called a library and not a framework?

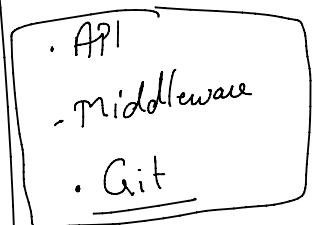

Because react does not come with almost all the pre installed libraries, which you would require for development.

Whereas angular comes with almost all the pre installed libraries that you would require for development purposes and you have to follow some set of

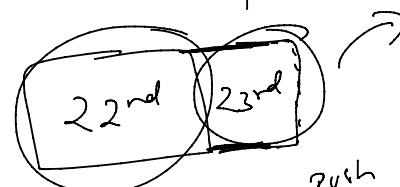

Frontend

- HTML
- CSS
- Bootstrap
- JS
- React JS

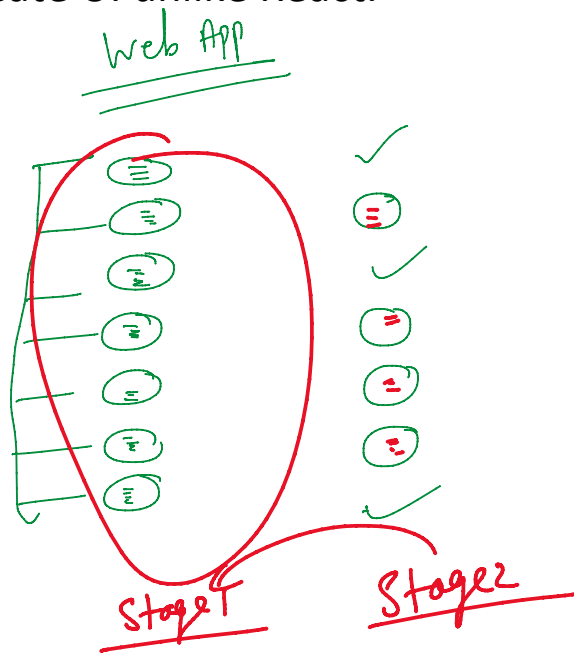

- Node ✓
- Express ✓

• JS

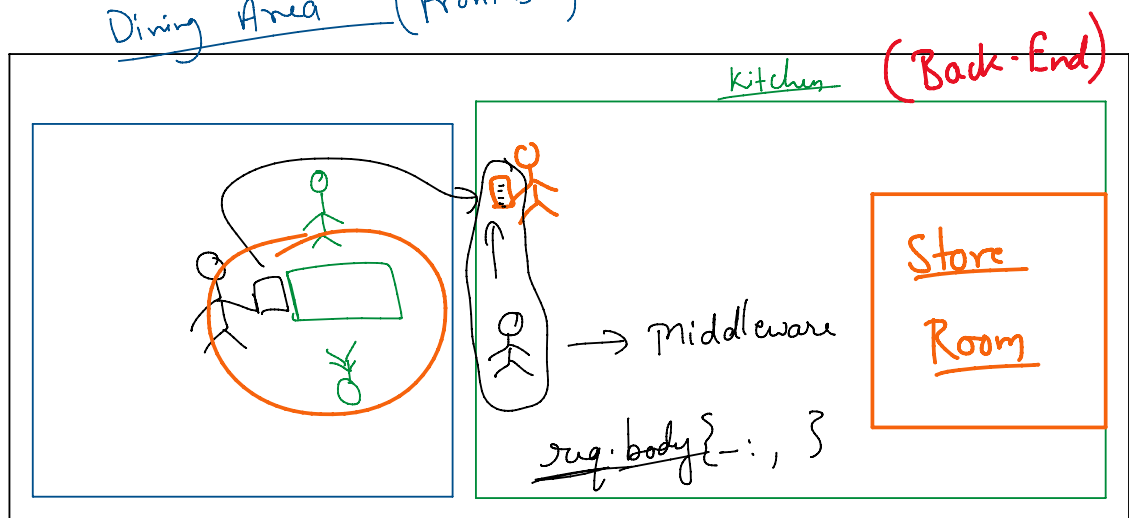

for development purposes and you have to follow some set of rules to create UI unlike React.
